PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/573,541

Applicant(s)

JURISCH, ANDREAS

Examiner

Jermele M. Hollington

Art Unit

2829

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 March 2006.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 26-50 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 26-47 and 50 is/are rejected.
- 7) ☒ Claim(s) 48-49 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
- ☒ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 03/2006.

- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 26-47 and 50 are rejected under 35 U.S.C. 102(e) as being anticipated by Watanabe et al (20020171433).

Regarding claims 26 and 36, Watanabe et al disclose [see Fig. 7] a measuring apparatus (measuring apparatus 600) for measuring a voltage at a point in a power distribution network (sheathed power cable 50), the measuring apparatus (600) comprising: a measuring circuit (voltage converting means 100) having a voltage sensor (capacitances 11 and 12) coupled to a current-carrying conductor (cable conductor) of the power distribution network (50) [see paragraph [0057] and last line of paragraph [0053]], and a further-processing configuration (microcomputer 650) connected to said voltage sensor, said further-processing configuration (650) having an output outputting a measured voltage value (effective voltage value) as an output signal; and an electronic filter (correction apparatus 800) functioning as a correction element and having an output side connected to said measuring circuit (100) [via item 650], said correction element (800) receiving the output signal (effective voltage value) from said measuring circuit (100) and outputting a corrected measured value (gain coefficient), said correction element (800)

having a transfer function (transmitter/receiver 822) being inverse to a transfer function (transmitter/receiver 610) of said measuring circuit (100) [via item 650], and it being possible for the transfer function (822) of said correction element (800) to be adjusted to match it to the transfer function (610) of said measuring circuit (100).

Regarding claims 27 and 37, Watanabe et al disclose said voltage sensor (11 and 12) is a capacitor device [see paragraph [0056]-[0057]].

Regarding claims 28 and 38, Watanabe et al disclose said capacitor device (11 and 12) is a coupling capacitor (11) formed from the current-carrying conductor of the power distribution network (50) [see paragraph [0055]] and an electrode which is DC-isolated from said current-carrying conductor (cable conductor) [see [0055]-[0057]].

Regarding claims 26 and 36, Watanabe et al disclose said electrode of said coupling capacitor (11) is a ring electrode surrounding the current-carrying conductor [see Fig. 5a-5b].

Regarding claims 29 and 40, Watanabe et al disclose said voltage sensor (11 and 12) is an inductive voltage transformer having a primary side connected to the current-carrying conductor (50).

Regarding claims 30 and 41, Watanabe et al disclose said correction element (800) has a switch (823) for optionally bypassing a remainder of said correction element (800).

Regarding claims 31 and 42, Watanabe et al disclose said measuring circuit (100) outputting an analog output signal (113) as the output signal and said correction element (800) is an analog filter [via item 821] having a PID characteristic.

Regarding claims 32 and 43, Watanabe et al disclose said measuring circuit (100) outputting a digital output signal (113) as the output signal and said correction element (800) is a digital filter [via item 821].

Regarding claims 33 and 44, Watanabe et al disclose the transfer function (822) of said digital filter (800) is a temporally discrete transfer function.

Regarding claims 34 and 45, Watanabe et al disclose the temporally discrete transfer function (800) of said digital filter has variable coefficients (gain coefficient).

Regarding claims 35 and 46, Watanabe et al disclose said further-processing configuration (650) has an input region (computation of effective value 653) and a DC isolating element in said input region (653).

Regarding claim 47, Watanabe et al disclose said DC isolating element [inside item 653] is an inductive current transformer.

Regarding claim 50, Watanabe et al disclose said further-processing configuration (650) has an analog-to-digital converter (A/D converter 651) on said output side.

Conclusion

3. Claims 48-49 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: regarding claim 48, the primary reason for the allowance of the claim is due further-processing

configuration has a resistor with a high resistance value and a voltage sensor has an output side connected to a series circuit. Since claim 49 depends from claim 48, it also has allowable subject matter.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jermele M. Hollington whose telephone number is (571) 272-1960. The examiner can normally be reached on M-F (9:00-4:00 EST) First Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ha Nguyen can be reached on (571) 272-1678. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
